

Terminal

The 'terminal.js' file is meant to be a replacement for the 'console' element of JavaScript. It remakes and adds a lot of new features to the console.

Print

Essentially 'console.log'.

newLine

Prints a new line.

Error

Prints an error to the console.

Clear

Clears the entire console.

Prompt

Prompts the user for input.

Wait

Waits a specified amount of time, then executes a callback.

Count

Counts how many times a specified input has been called to the 'Count' function.

countReset

Resets a specified value's amount of counts.

Debug

Returns a debug statement to the console.

Dir

Returns an input.

GroupUp

Goes up a group, causing an indent in logging.

GroupDown

Goes down a group, causing less indents in logging.

GroupReset

Returns to the lowest group.

Info

Returns an information statement.

Alarm

Waits a specified amount of time, then returns an alarm.

AlarmReset

Stop all alarms.

Warn

Returns a warning.

Table

Logs a table from an array.

Watch

Keep track of values.

Stop

Stop an invoked timer or watch.
